

VAST Vulnerability Scan Report

Report Date: 2026-02-04 18:14:10
Project Name: Test Project
Scan User: testuser (test@example.com)

Executive Summary

CRITICAL: 2 critical vulnerabilities found requiring immediate attention.

Vulnerability Statistics

Severity Level	Count	Risk Level
Critical	2	Extreme
High	3	High
Medium	5	Medium
Low	10	Low
Informational	15	Info
Total	35	-

Detailed Findings

1. [CRITICAL] python.sql-injection
Location: Line 15
Message: SQL injection vulnerability detected
Type: Sql Injection

2. [HIGH] python.command-injection
Location: Line 23
Message: Command injection vulnerability
Type: Command Injection

Security Recommendations

- Always validate and sanitize user inputs before processing
- Use parameterized queries or prepared statements for database operations
- Implement proper authentication and authorization mechanisms
- Keep all dependencies and libraries updated to latest secure versions
- Encrypt sensitive data both in transit and at rest
- Implement proper error handling without revealing system details

7. Conduct regular security testing and code reviews
8. Follow the principle of least privilege for all system components
9. Implement logging and monitoring for security events
10. Use secure coding practices and frameworks
